

For Immediate Release: June 30, 2005

**LA CABEZA RESOURCE EXPANSION DRILLING UNDERWAY -
NEW REPORT UPGRADES PROJECT RESOURCES**

Vancouver, B. C., June 30, 2005 – Exeter Resource Corporation (TSX-V: XRC, Frankfurt: EXB) announces that it has commenced an intensive program using three drill rigs to expand current gold resources at its La Cabeza gold project in Argentina.

The drilling program has three objectives: firstly to target new sites of mineralization at La Cabeza, including areas of higher-grade, near-surface mineralization that are not included in current estimates; secondly, to drill in-fill holes within the known resource to increase the confidence level of the deposit; thirdly, and importantly, to drill for new deposits under areas of extensive sand cover adjacent to known mineralization.

Upgraded Resource Estimate

Separately, Exeter has now received a new independent estimate of gold resources at La Cabeza. The report follows the company's recent announcement of an approximately 25% increase in the inferred resources at La Cabeza, to 890,000 ounces (see news release dated May 17, 2005), and concludes that a portion of those resources may be upgraded to the "indicated" category.

The new independent report now estimates an "indicated resource" at La Cabeza of 390,000 ounces of gold (6.2 million tonnes at an average grade of 2.0 g/t gold) and an "inferred resource" of 500,000 ounces of gold (12.1 million tonnes at a grade of 1.3 g/t gold), at a cut-off grade of 0.5 g/t.

At a higher, 1.0 g/t gold cut-off grade, the "indicated resource" is 3.5 million tonnes at a grade of 3.0 g/t gold for 330,000 ounces, and the "inferred resource" is 4.8 million tonnes at 2.2 g/t gold for 340,000 ounces.

La Cabeza Indicated and Inferred Resources

Indicated (0.5 grams/tonne gold cut-off)			
Zone	Tonnes	Grams/tonne Gold	Ounces Gold
Cuello	1,240,000	3.08	123,000
Ojo	1,740,000	2.22	124,000
Luna	1,870,000	1.57	94,000
Mandibula	1,330,000	1.16	50,000
Total	6,200,000	2.0	390,000
Inferred (0.5 grams/tonne gold cut-off)			
Zone	Tonnes	Grams/tonne Gold	Ounces Gold
Cuello	2,400,000	1.67	129,000
Ojo	1,530,000	0.93	46,000
Luna	3,620,000	1.16	135,000
Mandibula	3,970,000	1.03	131,000
Cachete	350,000	3.08	35,000
Labio East	100,000	4.44	14,000
Labio South	70,000	2.45	6,000
Labio West	80,000	1.67	4,000
Total	12,100,000	1.3	500,000
Indicated (1.0 grams/tonne gold cut-off)			
Zone	Tonnes	Grams/tonne Gold	Ounces Gold
Cuello	910,000	3.93	115,000
Ojo	910,000	3.62	106,000

Luna	1,120,000	2.15	77,000
Mandibula	530,000	1.83	31,000
Total	3,500,000	3.0	330,000
Inferred (1.0 grams/tonne gold cut-off)			
Zone	Tonnes	Grams/tonne Gold	Ounces Gold
Cuello	1,260,000	2.53	102,000
Ojo	380,000	1.67	20,000
Luna	1,270,000	2.01	82,000
Mandibula	1,260,000	1.76	71,000
Cachete	330,000	3.39	36,000
Labio East	90,000	4.96	14,000
Labio South	70,000	2.45	6,000
Labio West	90,000	2.04	6,000
Total	4,800,000	2.2	340,000

The revised mineral resources estimates for the Cuello, Luna, Ojo, and Mandibula deposits were made by Hellman & Schofield, Sydney, Australia using Multiple Indicator Kriging (“MIK”) methodology applied to the Exeter database and geological models. The models, database, and supporting information were independently validated by Peter Allen of Australian Mine Design and Development (“AMDAD”) of Brisbane, Australia. These revised resources were estimated using an additional 67 holes, totaling 4798 metres of drilling and 2050 metres of sawn channel sampling, conducted in 2004 and 2005.

The Cachete prospect resource was re-calculated internally by Exeter utilising a manual polygonal cross sectional method of estimation. Although new three-dimensional geological models were constructed for Cachete, it was deemed inappropriate to use MIK methods at this time, due to a lack of substantial drilling density. The previous resource estimates and assumptions for the Labio East, South and West prospects have been utilized, because the 2004 program did no work in these project areas. These estimates will be reviewed with the benefit of results of current drilling planned for these areas.

The new resource estimates have been described in a 43-101 Technical Report compiled by Exeter management. The report was co-authored and prepared under the supervision of Peter Allen of AMDAD, a “qualified person” independent of the Company under NI 43-101 of the Canadian Securities Administrators and will be filed with the Canadian regulators within the next 30 days.

AMDAD also carried out conceptual pit designs for Cuello, Luna, Ojo, and Mandibula which showed that, in addition to the indicated resource within pit perimeters, a significant proportion of the inferred resource remained within the potential open pits.

La Cabeza Studies

Engineering, metallurgical and environmental studies relating to the work program completed in April will be completed to normal pre-feasibility standards within a month, and relevant results will be reported as they come to hand.

The optimization of pit designs for La Cabeza and a financial analysis of the project status will be completed once the results of the current drilling program are received. With further drilling, inferred mineralization and extensions to the existing mineralized trends can be brought to account for an economic evaluation. In addition, by increasing the La Cabeza resource, there is potential for increasing the contemplated plant capacity substantially with subsequent economies of scale.

After reviewing the costs and utility of issuing a NI 43-101 compliant pre-feasibility study at this time, the Company’s technical team has determined not to do so. This decision is consistent with recent decisions made by other Canadian resource companies, because of the reporting limitations imposed by NI 43-101. Instead, following completion of the current drilling program, a decision will be made as to whether to move directly to a definitive feasibility study.

Quality Control and Assurance

The new resource estimates described in this news release include resources in the inferred category. NI 43-101 considers such resources to be too speculative geologically to have economic status and Exeter warns that no portion of these resources should be assumed to be upgradeable to the “indicated” or “measured” resource categories.

Mr. Peter Allen, B.Sc., an independent “qualified person”, and Matthew Williams, Exeter’s Exploration Manager, also a “qualified person” within the definition of that term in NI 43-101 of the Canadian Securities Administrators, have supervised the preparation of the technical information contained in this news release.

About Exeter

Exeter is a technically-advanced Canadian exploration company, focused on the discovery of epithermal gold/silver and porphyry copper/gold projects in Argentina and Chile. Exploration for new gold zones under extensive soil cover, and drill testing of new exploration targets outside those tabulated above, has recently commenced at La Cabeza. This exploration is expected to expand the existing resources. Engineering, metallurgical, hydrological, environmental and economic evaluation work is continuing.

In the prospective Patagonia region of Argentina, Exeter has a strategic partnership with Cerro Vanguardia S.A, an AngloGold Ashanti subsidiary. The agreement provides Exeter with an option over 25 epithermal gold-silver properties. Exeter recently completed a second stage program on the Cerro Puntudo Project following encouraging results released in February. Results are awaited. At Rosarita, Intrepid Minerals has advised Exeter that it is surrendering its option to joint venture the property.

In Patagonian Chile, Exeter has a strategic agreement with Rio Tinto Mining and Exploration Limited over epithermal gold prospects in an 800 square kilometer area. Prospecting of epithermal gold targets is currently underway.
