

**TABLE OF SIGNIFICANT PRELIMINARY ASSAY DRILL RESULTS FROM 23 DRILL HOLES IN THE LUNA ZONE AT DON SIXTO PROJECT**

**NEWS RELEASE NR 07- 09 DATED APRIL 4, 2007**

Significant assay results from the new drilling, at a cut-off grade of 0.5 grams per tonne ("g/t") gold, are as follows:

<b>Drill Hole</b>	<b>From (metres)</b>	<b>To (metres)</b>	<b>Width (metres)</b>	<b>Gold grade (g/t)</b>
<b>LCD-180</b>	<b>94.5</b>	<b>99.0</b>	<b>4.5</b>	<b>1.2</b>
<i>including</i>	<i>94.5</i>	<i>95.0</i>	<i>0.5</i>	<i>2.1</i>
	<b>101.7</b>	<b>103.0</b>	<b>1.3</b>	<b>3.0</b>
	113.0	114.0	1.0	1.1
LCD-183	73.4	74.2	0.8	2.1
	102.2	102.8	0.6	1.1
	120.0	123.0	3.0	1.0

<i>including</i>	23.0	24.0	1.0	11.1

**Notes:**

All results are down-hole intervals and may not represent true widths mineralization.

- \* Regular whole core samples of HQ-size diamond drill core, in representative rock types (in both mineralized and un-mineralized rocks) have been collected and dispatched to the University of San Juan in Argentina for simple compression tests ("SCT"). In each case, for reporting purposes, the intervals have been assigned a gold grade of zero. The drill intercepts thus affected include the following:

In LCD-188, the interval from 30.0 to 31.0 metres, and  
In LCD-200, the interval from 28.0 to 29.0 metres and 137.9 to 138.9 metres.

\*\* Drill hole LCP-254 intersected mineralization, greater than 0.5 g/t gold, in the intervals 70.0 to 71.0 metres and 72.0 to 73.0 metres. Given that the core recoveries in the two intervals were significantly less than that required for reporting purposes, the intervals were assigned a gold grade of zero. This hole represents an exploratory hole at the end of one of the fences of drilling to test for mineralization under sand cover, and will be followed up by additional drilling.

**[For a detailed map showing drill hole locations please click here](#)**

Drill holes LCD-197, LCD-200, LCP-264, LCP-274, LCP-275, LCP-280, LCP-313 and LCP-321 were exploratory holes to test the potential for “*en echelon*” style continuation, to the north and northeast, of the relatively shallow dipping mineralization at the main Luna Zone. The first indication of the potential in this area, was from LCP-148 which returned 12.0 metres at a grade of 2.4 g/t gold (refer to the press release dated May 9, 2005) and from LCP-226 which returned 6.0 metres at a grade of 1.5 g/t gold (refer to the press release dated September 18, 2006). The drilling has confirmed the presence of significant mineralization at this zone beneath sand cover, which has been defined over a minimum strike length of 200 metres, and is open, both to the northwest and southeast. Note that the mineralized intervals reported in the above table, for drill holes LCP-321 and LCD-200, include the shallower intervals, above the 15 metre and 100 metre levels, respectively, which represent mineralization at the main Luna Zone. Drill hole LCP-319, located to the southeast of the zone, also intersected mineralization greater than 0.5 g/t gold, inferring that the zone continues to the southeast. Given that the sample recoveries for this hole were significantly less than those required for reporting purposes, it has not been included in the above table.

Drill holes LCD-186, LCD-188, LCD-189 and LCD-192 represent infill drilling at the zone west of the main Luna Zone. LCD-186 is significant in that it is the most north-western drill hole in the area, and has intersected near surface mineralization over a greater width than was previously encountered. Additional drilling is planned in this area.

Drill holes LCP-254 and LCP-255 were drilled as part of the reconnaissance fence drilling program that tested for mineralization beneath sand cover. LCP-254 is significant in that it tested the north-western extension of a known vein and intersected but at a greater depth. The drill hole intersected higher grades and greater width of mineralization than was previously known (the nearby drill hole, LCP-187 returned 3.0 metres at a grade of 2.6 g/t gold).

LCP-239, LCP-318, LCD-180, LCD-183, LCD-185, LCD-190, LCD-206 and LCD-208 all represent step back or infill drilling within the “Luna Extensions” area, located south of the main Luna Zone. All of the holes confirmed the continuity of mineralization at depth. In the case of LCD-185, mineralization was intersected over a greater width and at a higher grade than previously intersected in shallower drill hole LCD-160. The shallower hole returned 12.0 metres at a grade of 1.0 g/t gold and 6.0 metres at a grade of 1.4 g/t gold (refer to the press release dated December 11, 2006).

**Quality Control and Assurance**

The gold assay results presented above are preliminary and have been calculated using a 0.5 g/t gold cut-off grade, with no cutting of high grades. All reverse circulation drill samples are collected using a cyclone in one metre intervals; the majority are then composited into three metre samples. The results in the table above are a combination of one metre re-sampled intervals or the original three metre composites. All diamond drill core samples are split on regular metre intervals or on geological contacts and represent sawn half HQ-size core. Samples were prepared at the ALS Chemex preparation facility in Mendoza and assayed by fire assay (50 gram charge) at the ALS Chemex laboratory in Chile, both ISO-9001:2000 certified laboratories.

Check assaying of all samples assaying greater than 1.0 g/t gold will be completed by ALS Chemex. Standard and blank samples are used throughout the sample sequence as checks for the diamond drilling reported in this release. Standard, blank and duplicate samples are used throughout the sample

sequence as checks for the resource definition reverse circulation drilling. Blank and duplicate samples are used throughout the sample sequence as checks for the exploratory reverse circulation drilling.

Matthew Williams, Exeter's Exploration Manager and a "qualified person" within the definition of that term in National Instrument 43-101, *Standards of Disclosure for Mineral Projects*, has supervised the preparation of the technical information contained in this table that accompanies the news release.
